

The company

A component and parts supplier for the automobile industry. They manufacture powertrain products through 60+ manufacturing facilities across 18 countries within North and South America, Europe and Asia.

The old workflow

The customer has many employees in the field who work off-shift hours or weekends. They had a manual system of phone calls to keep in touch with these employees during their shifts to ensure their safety. Such a system was not rigorous enough nor could it be scaled to handle the hundreds of field employees who needed to be monitored for safety.

The new workflow

The customer was looking for a more automated system that would enable them to keep track of their field employees. Adopting allGeo's Lone Worker Safety solution helped them set up a four step safety protocol for their field staff.
